

Toho Water Lake Marion WRF Upgrades

What This Project Brings to Our Community

- **Healthier Waterways & Wildlife:** We are upgrading our 3 million-gallon-per-day treatment process to significantly lower nitrogen and phosphorus levels. Reducing these nutrients helps protect Lake Marion and nearby natural habitats, keeping our water ecosystems balanced and flourishing in line with the Florida Department of Environmental Protection's latest guidelines.
- **Long-Term Reliability:** We're investing in key operational enhancements across the facility so it continues running smoothly, efficiently, and dependably every single day.
- **A Greener Tomorrow:** By continuously upgrading our facilities, we ensure our infrastructure grows stronger while keeping our commitment to environmental sustainability.
