

Toho Water Northwest WTP Storage Expansion

What This Project Brings to Our Community

We're pleased to share details about our **Northwest Water Treatment Plant Storage Expansion**, a project thoughtfully designed to improve fire protection and enhance daily water services across our community.

- **Stronger, Safer Neighborhood Fire Protection:**
We are building a new ground storage tank to hold extra water reserves. This ensures our local emergency services and fire hydrants always have a strong, steady, and reliable water supply whenever it's needed most.
- **Safer Working Conditions for Our Team:**
Upgrading to a new above-ground flow meter assembly allows our dedicated technicians to monitor and track the amount of drinking water distributed to the Toho community.
