

Toho Water Sunbridge WTP Expansion

What This Project Brings to Our Community

- **More Water for Our Growing Home:** We're expanding our capacity to 4.8 million gallons a day (enough water to fill the first 16 floors of the Empire State Building) with extra ground storage tanks and expansion of the treatment process, so our community always has a dependable supply
- **Pure, High-Quality Taste:** We're bringing in advanced nanofiltration technology to deliver the best water directly to your home
- **A Fresher Experience:** By removing hydrogen sulfide, we're eliminating those unpleasant sulfur odors so your water always smells as clean as it tastes
- **A Safer, Gentler Process:** We are ending the use of ammonia in our treatment process, moving toward simpler, more natural water care methods

2026

construction started in
this year

2028

target date to end
construction

\$58m

anticipated budget for
expanding production
