

Toho Water Whaley WTP Improvements

What This Project Brings to Our Community

As part of our ongoing commitment to St. Cloud, we are upgrading the treatment process at the **Whaley Water Treatment Plant**. This entails transitioning to a modern fixed-bed ion-exchange system, replacing the older setup with advanced, efficient technology.

How this benefits our community:

- **Greater Efficiency & Savings:** This modernized system streamlines our operations, helping us reduce overall operational costs and manage resources wisely.
- **Expanded Capacity:** Upgrading our technology increases our treatment capacity, ensuring our water supply comfortably keeps pace with our growing neighborhoods.
- **Long-Term Dependability:** Investing in modern infrastructure today ensures consistent, high-standard water service for your home for years to come.
